Antwort

In diesem Fall ändert sich hier kaum etwas. Sie müssen Sicherstellen, das im DvISE Administrator unterhalb vn »Konfiguration -> System -> Domäne« die Domäne hinterlegt ist.
Dieser Eintrag verhindert, dass der Postman für Ihren eigenen Domänenamen eine Verbindung ins Internet aufbaut.
Für die Verteilung der Nachrichten die via DvISE Grabbing Server abgeholt werden´, müssen entsprechende Verteilregeln angelegt werden. Alle eMail-Empfängeradressen die nicht in der Benutzerkonfiguration hinterlegt wurden landen im Archive »Unverteilt«.
